## Comparing Numbers Using Symbols

When comparing numbers, we can use symbols to show whether numbers are greater than, less than, or equal to each other. Solve each problem with a  $<$ ,  $>$ , or  $=$  sign.

$$\underline{7} \quad \underline{3}$$

$$\underline{17} \quad \underline{12}$$

$$\underline{11} \quad \underline{18}$$

$$\underline{16} \quad \underline{15}$$

$$\underline{15} \quad \underline{17}$$

$$\underline{19} \quad \underline{9}$$

$$\underline{20} \quad \underline{12}$$

### Examples

$$\underline{34} > \underline{23}$$

$$\underline{20} < \underline{30}$$

$$\underline{10} = \underline{10}$$

$$\underline{12} \quad \underline{13}$$

$$\underline{11} \quad \underline{10}$$

$$\underline{14} \quad \underline{14}$$

## Comparing Numbers Using Symbols

When comparing numbers, we can use symbols to show whether numbers are greater than, less than, or equal to each other. Solve each problem with a  $<$ ,  $>$ , or  $=$  sign.

### Answer Key

$$\underline{7} > \underline{3}$$

$$\underline{17} > \underline{12}$$

$$\underline{11} < \underline{18}$$

$$\underline{16} > \underline{15}$$

$$\underline{15} < \underline{17}$$

$$\underline{19} > \underline{9}$$

$$\underline{20} > \underline{12}$$

### Examples

$$\underline{34} > \underline{23}$$

$$\underline{20} < \underline{30}$$

$$\underline{10} = \underline{10}$$

$$\underline{12} < \underline{13}$$

$$\underline{11} > \underline{10}$$

$$\underline{14} = \underline{14}$$
