## Identifying Equivalent Measurements: Metric System Grams and Kilograms

```
In this worksheet, we will practice identifying equivalent measurements between units in the
metric system. Specifically, we will be working with grams and kilograms. As you solve the
problems below, remember 1 kilogram is equal to 1000 grams.
For example, 2 kilograms =
``` \(\qquad\)
``` grams
2 kilograms x \(\mathbf{1 0 0 0}\) (grams in a kilogram) = \(\mathbf{2 0 0 0}\) grams
```

## Exercise Questions:

1. 25,000 grams $=$ $\qquad$ kilograms
2. 5 kilograms = $\qquad$ grams
3. 7,000 grams = $\qquad$ kilograms
4. Milo's bicycle weighs 12 kilograms. How many grams does it weigh?
5. Sienna's cat weighs 4000 grams. Her cat's carrier crate weighs 2000 grams. How much would the crate weigh is the cat was inside?

Total weight $=$ $\qquad$ kilograms

## Answer Key

## Identifying Equivalent Measurements: Metric System <br> Grams and Kilograms

```
In this worksheet, we will practice identifying equivalent measurements between units in the metric system. Specifically, we will be working with grams and kilograms. As you solve the problems below, remember 1 kilogram is equal to 1000 grams.
For example, 2 kilograms =
``` \(\qquad\)
``` grams
2 kilograms x \(\mathbf{1 0 0 0}\) (grams in a kilogram) = \(\mathbf{2 0 0 0}\) grams
```

## Exercise Questions:

1. 25,000 grams $=$ $\qquad$ kilograms
2. 5 kilograms = 5,000 grams
3. 7,000 grams = $\qquad$ kilograms
4. Milo's bicycle weighs 12 kilograms. How many grams does it weigh?

12,000 grams
5. Sienna's cat weighs 4000 grams. Her cat's carrier crate weighs 2000 grams. How much would the crate weigh is the cat was inside?

Total weight $=$ $\qquad$ kilograms
