## Least Common Multiple

```
In this worksheet, we will practice determining the least common multiple between two
numbers. Basically, determining the least common multiple is finding the smallest number that
both have in common when you list their multiples.
For example: Find the least common multiple of 3 and 4.
First, list the first several multiples of 3 and 4.
3: 3, 6, 9, 12, 15
4:4, 8, 12,16,20
The smallest number that both have in common is 12,
so the least common multiple of 3 and 4 is 12.
```

## Exercise Questions:

1. Determine the least common multiple of 2 and 3 . $\qquad$
2. Determine the least common multiple of 4 and 6 . $\qquad$
3. Determine the least common multiple of 6 and 8 . $\qquad$
4. Determine the least common multiple of 8 and 12. $\qquad$
5. Determine the least common multiple of 10 and 12. $\qquad$

## Answer Key

## Least Common Multiple

```
In this worksheet, we will practice determining the least common multiple between two numbers. Basically, determining the least common multiple is finding the smallest number that both have in common when you list their multiples.
For example: Find the least common multiple of 3 and 4.
First, list the first several multiples of 3 and 4.
3: 3, 6, 9, 12,15
\(4: 4,8, \underline{12}, 16,20\)
The smallest number that both have in common is 12 , so the least common multiple of 3 and 4 is 12 .
```

## Exercise Questions:

1. Determine the least common multiple of 2 and 3 . $\qquad$
2. Determine the least common multiple of 4 and 6 . $\qquad$ 12
3. Determine the least common multiple of 6 and 8 . $\qquad$
4. Determine the least common multiple of 8 and 12. 24
5. Determine the least common multiple of 10 and 12. $\qquad$
